

Bulk upload process

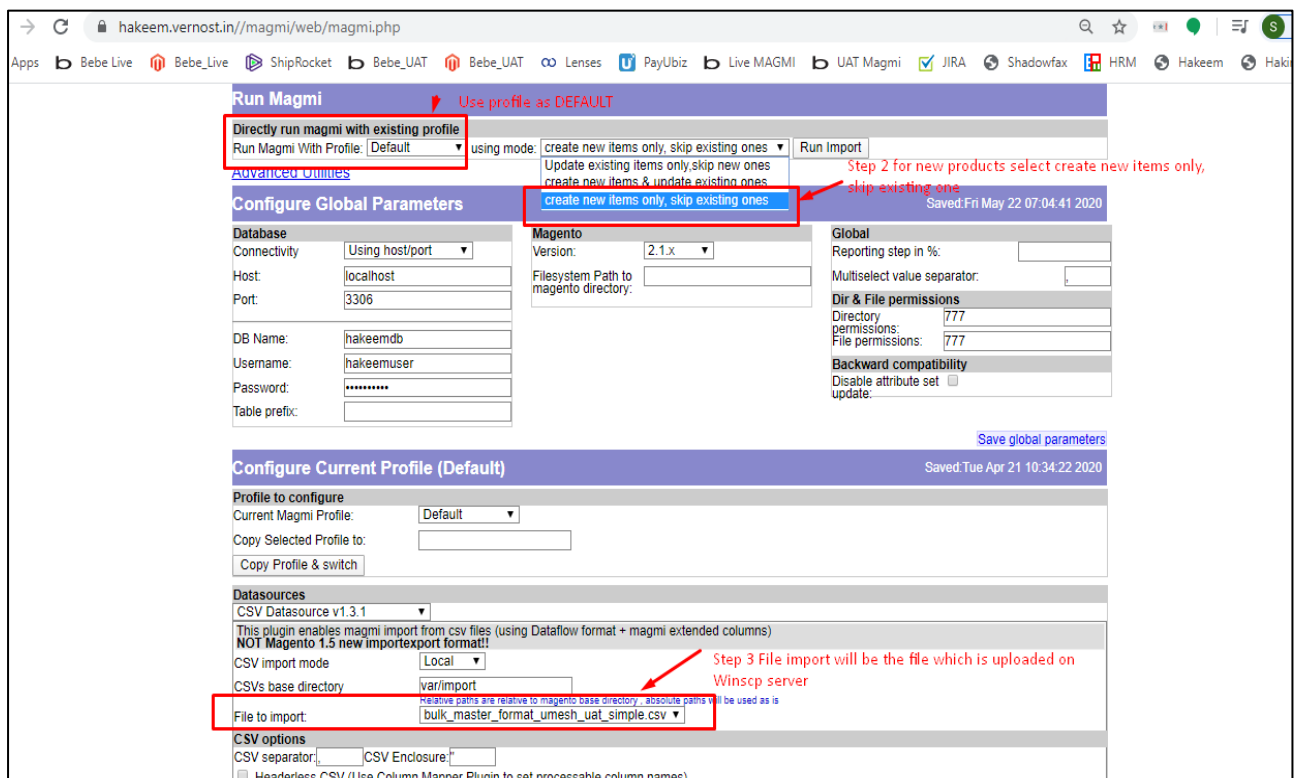

- Bulk file uploading process are same for Glasses & contact lenses, only format are different.
- While creating bulk file the heading of each column(attribute) should be same as per the file.
- attributes are already created in Magento.
- Once bulk file ready to upload on server then log in WinSCP by login details and upload .csv file in **VAR >WWW/HTML/company/VAR/ IMPORT** folder. (file name should be in small letter and without space like bulk_22may.csv)

- Also, upload products images in **VAR >WWW/HTML/COMPANY/PUB/MEDIA/IMPORT** folder. (images name should be without space like 36403_2)
- For glasses product we used dimensions 1100 x 1100 and for contact lenses we used 900 x 900 in below 100kb size.

- Once bulk file & images get uploaded on server then log in on Magmi and run file to upload products on frontend.
- Select Profile as **DEFAULT** > **CREATE NEW ITEMS ONLY SKIP EXISTING ONE** >
- Select uploaded file and click on **RUN IMPORT** >
- Apply selected parameters > RUN wait to import file 100% then check errors if Magmi shows otherwise check uploaded products in Backend.
- If products are created, then clear **CACHE** then products get visible on frontend.

- **Once products get created in Magento need to do reindexing & cache clear then products will get visible on frontend.**
- To update products title & discription in arabic need to upload arabic values file then products arabic values will get change on arabic store.
- now glasses product creation process is completed.
- For contact lenses,after product creation ,we need to assign template to products for update power values.
- then we need to update price bulk file for each and every powers .
- after that we need to update arabic value file to update arabic values.
- **Once products get updated in Magento need to do reindexing & need to clear cache.**
